

Python Code Reference

A basic Python script:

```
1 def greet(name: str) -> str:
2     return f"Hello, {name}!"
3
4 # Loop example
5 for i in range(5):
6     print(f"i = {i}")
7
8 if __name__ == "__main__":
9     print(greet("World"))
```

Inline: use `print()` to write output to stdout.
